GameTek also developed a sequel, Shadowfire, in 2002. Reception Alex Henderson of Computer Gaming World said that Dark Colony was "reasonably priced" and "not full of bugs." While criticizing the lack of excitement of the missions, Henderson concluded that "this fast-paced yet complex strategy game is worth trying out if you like to play military games." A reviewer for Next Generation said that "it's certainly a fairly deep game, but it's also a step back from the exciting, fast-paced action of games like Warcraft and Command and Conquer. But for those who don't want a real-time strategy game that's a step too far out of the action genre, Dark Colony is certainly worth checking out." He praised the game's numerous game features, noting that "the graphics are crisp and clear, the AI is surprisingly good, and the many game options make it a real challenge to win." He concluded that "when it comes right down to it, though, Dark Colony isn't really a true 4X, but a game that is good at what it does, but not great. If you're into the military strategy genre, you may find a lot of enjoyment here, but it's not a game you'll be playing more than a few hours at a time." Future Shock is the latest documentary to deal with the question of what will happen when humans become more sentient than we are now. The film starts with the questions: "Where are we?" "Are we alone?" and "How will the next hundred years affect our lives?" It then looks at the past two hundred years of genetic engineering, the spread of the Internet and the current development of nanotechnology to show the effect on society and what it all means. On the planet of Earth, Mars and the moon, the Earth is beginning to spread out, to become ever more complex and complex. But also, there is a breakthrough in genetic engineering that will allow people to live forever. Genetic engineering will allow
