Biophysical agents are a class of pharmaceuticals that have been used in dentistry for over 20 years. Their unique ability to modulate tissue and cellular reactions, including the modulation of osteoblasts, explains their usefulness for the repair and regeneration of osseous structures. This paper reviews and discusses studies that demonstrate the osteogenic effects of biophysical agents. The authors discuss the literature review and summarize recent evidence for the osteogenic effects of electrical and electromagnetic fields, shock wave and magnetic fields, and ultrasound.[Anesthesia for minor pediatric surgery under combined spinal-epidural analgesia]. Combined spinal-epidural anesthesia is a good option in patients with a severe condition. Nowadays, with the advance of the technique, the use of this method is not limited only to the elderly patients, but also to children. Recently, we experienced anesthesiologic complications during the use of combined spinal-epidural anesthesia for minor pediatric surgery. We report our experience with two patients with lumbar spina bifida who were anesthetized with combined spinal-epidural anesthesia. One patient had a major intraoperative complication with hypothermia, circulatory arrest and cardiac arrest. On the other hand, the other patient had a pneumothorax in the preoperative period. There were no anesthetic complications in both patients. Combined spinal-epid
