A: Besides this tool: there are a few others out there. Search for 'SCS unlocker for ETS 2' and you'll find them. Q: How to retrieve current network status of a computer in WPF app? I'm making a Windows Application that connects to Active Directory and retrieves the computers current working status. I want to know if a computer is online/offline, unresponsive, broken, etc, what I would like to do is run a T-SQL query against the active directory and display the information on a label in my WPF application. What would be the best way to accomplish this in a WPF app? A: Relying on Active Directory alone is a bad idea; the
