A: It's the result of virtualization and/or system rescue that doesn't allow hardlinks on files, read the article: Q: Unable to re-render webcomponent, even when global function is called in the component I have a react app using react-webpack-boilerplate for the webpack configuration. Everything works fine. My app re-renders and renders my component as expected. However, when I do the following: Move the component into a separate file. Move the function to global scope. Re-render the component after the function is called. The component is still rendered, but the props are not re-evaluated. Anyone seen this before? The component: `import React from 'react'; import PropTypes from 'prop-types'; function test(prop) { console.log(prop); } function test2() { console.log(1); } class Component extends React.Component { render() { return ({this.props.children}); } } Component.propTypes = { children: PropTypes.any }; export default Component;` The webpack config: `const path = require('path'); const HtmlWebpackPlugin = require('html-webpack-plugin'); const HtmlWebpackPluginConfig = new HtmlWebpackPlugin({ template: './index.html', inject: 'body' }); module.exports = { entry: './src/index.js', output: { path: path.resolve(__dirname, './dist'), publicPath: '/', filename: 'bundle.js' }, module: { rules: [{ test: /2d92ce491b`
