Upload as an audio clip and share as a song. Then click play and enjoy music for hours on end. This is my go-to tool. It does not feel like YouTube anymore. It's like this app is a standalone. VLC Media Player is also good but I just wanted the simplicity and simplicity of Coub. YouTube Music is an interesting service to build off of. Google has built their own music streaming service to compete with Spotify, Apple Music and Amazon Music. However, you'll need to download the YouTube app on your phone to enjoy. The built-in player in YouTube Music is not as good as the built-in player on the video-watching site. Google has built a music service for everyone Google has built a music service for everyone. There are a few options to choose from. For fans of live music, Play Music is Google's best option. For fans of modern songs, the YouTube Music service is perfect. If you are looking to listen to jazz standards, you'll want to check out the YouTube Red subscription service. Lastly, if you are a big fan of classic, old-fashioned songs, you'll want to subscribe to Google Play Music.

Aberrant expression of the HMG box-containing transcriptional coactivator PGC-1 α in oral squamous cell carcinoma and its association with smoking, drinking, and HPV status. Oral squamous cell carcinoma (OSCC) is one of the most common malignant neoplasms of the head and neck. In the present study, aberrant expression of PGC-1 α was analyzed in 55 OSCC tissues and 8 normal oral mucosa tissues. The association between PGC-1 α and OSCC clinical characteristics, including smoking, drinking, and human papillomavirus (HPV) infection, was analyzed. Immunohistochemistry showed that the expression of PGC-1 α was significantly lower in OSCC than that in normal oral mucosa. A stratified analysis showed that decreased PGC-1 α expression was correlated with a high histologic grade (P=0.001), a poor prognosis (P=0.002), and smoking (P=0.004), but not with drinking (P=0.569) or HPV (P=0.929). The data indicate that the low expression of PGC-1 α may be associated with the development and prognosis of OSCC and may play a role in smoking-induced
