1) Scroll vertically through the scene. 2) Zoom in to an object (defined by a window handle) 3) Scroll horizontally through the scene. 4) Pan to an object (defined by a window handle) 5) Rotate an object (defined by a window handle) 6) Flip an object (defined by a window handle) 7) Scale an object (defined by a window handle) 8) Rotate an object (defined by a window handle) 9) Flip an object (defined by a window handle) 10) Scale an object (defined by a window handle) 11) Show/Hide a window on a scene by clicking the mouse button 12) Exit the program GeoTest: This component is used to display the Object-Oriented properties of the entities in the selected map element. KeyMACRO Description: 1) Set the map focus area 2) Show GeoTest 3) Show GeoTest All 4) Zoom in 5) Zoom out 6) Click to a specific location on the map 7) Back to default 8) Close GeoTest VectorPrint: The main function of the component is to get a property value for a specific entity in the map and print the value in the component that contains a line to a file. KEYMACRO Description: 1) Set the map focus area 2) Show VectorPrint 3) Show VectorPrint All 4) Click to a specific location on the map 5) Back to default 6) Close VectorPrint [IMPORTANT] - All the other components are written using C# and make use of the Interop.SDK. Now and again, Interop.SDK will add/remove features from the Interop.SDK. If you are experiencing issues please restart your computer. (This is an OS level issue). Project 2 - ImgInspect: You can use this project to make some changes in the external (possible) properties of a component (for example, Bounding Box, Color, Depth). The component will save the changes you make and will reload them the next time you open the project. To make changes, you can use the zoom tool or the change the color and dimensions of an object. You can also make other modifications if you wish. Also, if you want you can add a property to the component and save it. Then
