Is there a way to prevent this from happening? So that if one of the values is changed, it will automatically change the other two values? I'm using EmberJS, but the answer doesn't have to be Ember specific. $("#equipment_list").bind("click", function(e) { var item = $(this).attr("data-item"); var item_index = $(this).data("item-index"); var value = $(this).data("value"); var data

Nov 16, 2010 Category:Mentor GraphicsAssessment of osteogenesis in human pre-osteoblastic cell lines in vitro. The proliferation and differentiation of human mesenchymal stem cells are of high interest for bone tissue engineering. As a first step towards their clinical application, we investigated whether the human pre-osteoblastic cell lines SaOS-2 and U-2OS express markers of osteogenic differentiation. We studied both cell types and the effects of osteogenic induction. With regard to the expression of osteogenic markers, SaOS-2 showed a higher basal expression than U-2OS. After osteogenic induction, the mRNA expression of osteopontin (OPN) and bone sialoprotein (BSP) was higher in SaOS-2 than in U-2OS. The expression of alkaline phosphatase (ALP) was not different in the two cell lines 2d92ce491b
