The main idea behind this project is to produce a stable currency that has a minimum of volatility. I'm trying to find a start point to start learning about the blockchain and getting familiar with the way it works. I need a good explanation of how the blockchain works, but also at least a little bit about how all the system works as a whole. Thanks in advance. A: You can start by reading The Genesis Block of Bitcoin to see how the blockchain as a whole operates. In Bitcoin, when a new block is mined, it has a unique transaction, known as the 'Genesis Transaction', and all other transactions that have occurred on the network are linked to the first block in the chain. This is known as the 'Blockchain' and is the primary tool for Bitcoin's security. If you're interested in other cryptocurrencies, there are many great resources for them too - the Github project Coinmarketcap has a large database of cryptocurrencies and their current market value. Q: Parsing html to lists for data binding in xaml For a Xamarin Forms project I have some JSON coming from an API, and I need to bind this data in xaml. This is the API: The problem is that the data I need to parse is in the tags. So here is an example of a JSON response: { "query":{ "facets":[{ "term":"cat", "boost":100}, {"term":"dog", "boost":100}, {"term":"bird", "boost":100} ]}, "doc\_2d92ce491b
