The game Tales of Zestiria in Japanese is known as Tales of Xillia in the West. It was released on August 29, 2013 in Japan.

**Story** In the world of Xillia, an epic journey begins as a young boy named Xander returns to his home town of Czeladon to reunite with his childhood friends, and unravel the secrets of his forgotten past. He must soon embark on a quest across three mystical worlds to awaken a lost weapon that was entrusted to his family for thousands of years. Along the way, he will encounter countless friends and foes, and will learn what it truly means to be a hero.

**Characters** Gameplay Tales of Xillia features a blend of first- and third-person action-RPG game play elements as players perform both hack-and-slash and role-playing tactics, and they battle to complete dungeons, travel across the world, and participate in story sequences. As players progress through the game, they encounter enemies and in-game events that affect them based on decisions they make, a trait which has influenced fans and critics alike. At the beginning of the game, the player is introduced to the three main characters, and characters are customizable, allowing players to make decisions that have an impact on their gameplay and story. As players make decisions, they are judged by Czeladon's Tribunal and must make moral choices based on a higher law. In battles, players use magic that is an amalgamation of multiple elements such as fire, ice, lightning, wind and more. When players attack, characters gain experience points and levels that contribute to stat growth and ability enhancements. Players can also use items or equipment called "Gadgets", which have an impact on gameplay in various ways.

**Plot** The game takes place in a parallel world that is "a fantastic realm" where the "earth abides by the laws of the realm of light, where beings who possess power to heal the world are called "healers," and where "magical girls" have become the new hope for humans." In this world, the "Sword of Dawn" (or "Sword of Light") is the weapon of these "healers." In this world, a young boy named Xander returns to his home town of Czeladon to reunite with his childhood friends and to unravel the mysteries of his forgotten past. He must soon embark on a quest across three mystical worlds to awaken

1. Field of the Invention The present invention relates to a fixing apparatus for use in an image forming apparatus such as a copying machine, a printer, or a facsimile machine, and an image forming apparatus having the fixing apparatus. 2. Discussion of the Background Art In an image forming apparatus such as a copying machine, a printer, or a facsimile machine, a toner image formed on a recording material (e.g., a sheet of paper, an OHP sheet, or the like) is fixed on the recording material by a fixing apparatus, and the fixed toner image is discharged as a printed matter. A roller-type fixing apparatus is known as the fixing apparatus. The roller-type fixing apparatus is typically equipped with a fixing roller having an inner-surface layer made of a heat-resistant resin such as a silicone rubber or a fluorine resin and an outer-surface layer made of a fluorine resin. The fixing roller rotates, and a recording material having a toner image formed thereon passes through a fixing nip portion, which is formed between the fixing roller and a pressure roller, and the toner image is fixed on the recording material by heat and pressure of the fixing roller and the pressure roller. Such a fixing apparatus can be also applied to an image forming apparatus having a printing function. In such an image forming apparatus, a printed matter is discharged from the apparatus immediately after the printed matter is printed. Thereafter, the printed matter is carried by a user and delivered to an optional delivery destination. When the fixing apparatus having the above-described configuration is applied to the image forming apparatus, if the printed matter with the toner image is carried by the user, the toner image may be smudged on the printed matter or the like, or adhered to a component (e.g., a sheet guide member) constituting the apparatus. Therefore, there is known an image forming apparatus equipped with a delivery tray, on which a printed matter with a toner image is received, and a discharge tray, to which the printed matter is discharged. The image forming apparatus transfers the printed matter from the delivery tray to the discharge tray when a predetermined time period has elapsed after the printing of 2d92ce491b
