can someone help me with my cat et 2011b? A: This is not a license key. It's a device ID, used in SIS devices. The license key is the one in the DB or on the CAT, which is not a standard database. They're linked via the vendor ID and the SIS ID. You need to get your device ID from a SIS device, e.g. from your CAT, and convert it to a MySQL compatible value. The SIS-ID value is: FEEF FCBD 85C4 BCB6 8717 8329 8133 CABA and the vendor ID is: 5420 0043 7D6C This can be done with a simple bash script. #!/bin/bash echo echo echo "The SIS Device ID" echo "-----" echo echo "SIS Device ID is: \$1" echo echo "The CAT ID is: \$2" echo "The Vendor ID is: \$3" echo echo "What is your SIS Device ID?" echo "-----" read -p "Input SIS Device ID" sisid echo echo "What is your CAT ID?" echo "-----" read -p "Input CAT ID" catid echo echo "What is your vendor ID?" echo "-----" read -p "Input Vendor ID" vendorid echo # To convert the SIS id to the MySQL compatible code, use this command: echo "Convert to MySQL code" echo "-----" echo "Converting SIS ID to MySQL compatible code" echo "-----" cat \$sisid | tr -cd "0-9A-Z" | sed's/_/_g' echo echo "Convert from MySQL to SIS code" echo "-----" echo "Converting MySQL compatible code to SIS code" echo "-----" cat \$1 | tr -cd "0-9A-Z" | sed's/_/_g' echo echo "What is your MySQL code?" echo "-----" read -p "Input MySQL code" mysqlid echo echo "What is your vendor code?" echo "-----" read -p "Input 2d92ce491b"
