
31 Busy Kids CAWs For WWE SmackDown Here Comes The Pain

The following files have been downloaded 0 times. Only Speed-Locked files will be added to your Download List and will always be available with FastDownload. Files are listed alphabetically by file extension, the default listing order. Files that start with a period (".") are hidden or password-protected. Show all (.) files Files can be downloaded with a free account or a premium account, only downloadable files are listed here. Premium Downloadable files have a price tag and a stock count, files which are only available in season mode can be purchased with money earned during season mode.

Q: No active object passed in constructor? I'm curious why I'm getting an error "No active object passed to constructor" when I try to create an object like this. I'm pretty sure there's a more correct way to do it but just haven't discovered the way. Class I'm trying to create new object of:

```
public class Weapon { public Weapon(int i, String s){ this.id = i; this.name = s; } private int id; private String name; } JUnit test: public class WeaponTest { @Test public void test(){ Weapon sword = new Weapon(100,"some sword"); assertEquals(100, sword.id); assertEquals("some sword", sword.name); } }
```

A: When you're creating new weapon object, you're not providing parameter to constructor, so it can't call the constructor. As you can read here from Java Docs: If the class being instantiated implements the interface, then a necessary step in the construction process is to perform instance creation on behalf of the newly created object. This is accomplished using the constructor of the target class that corresponds to the constructor of the interface (§8.8.8.1) that was being implemented. The "necessary step" goes something like this: `new Weapon(arg1, arg2)`; So you need to provide a

parameter to the constructor of Weapon class. Simply add this : `Weapon sword = new Weapon(100, "some sword");` Your test will pass as expected. Martín Gerraldo de E
