The Dynamic Library Rld.dll Failed To Initialize E408

Just wondering is if it is okay if I remove the rld.dll in the windows\programs folder, to avoid any further problems? Hi, I have problems with my rld.dll files and my games. 2 years ago Hi, I am experiencing the same issue. Trying to install the "The Sims 4" game and I get the error "The dynamic library "rld.dll" failed to initialize (E1103)". I have tried manually deleting the rld.dll from the same directory as the game exe, but still get the same error. I checked for updates, and tried to use the DirectX Mar 26, 2019. My current Settings are set up for Windows 7 and I use the NVIDIA drivers. The following is what I have tried: Disable Software Protection Uninstall NVIDIA driver Download new NVIDIA driver Same error Uninstall exe Download new exe Same error So I then tried updating my drivers. I downloaded NVIDIA display driver for GeForce Experience and manually installed it and rebooted. I did not have to update any registry keys. The GeForce Experience program defaulted to the new driver. I tried installing and running the "The Sims 4" game again. I received the error message. It was the same error message each time. There is no error in the registry. The error pops up 5 times before installation and 1 time after installation. My OS is Windows 7 32 bit. I do not use any security software and I have closed all non necessary security programs. I do not have any anti-virus programs installed. I have the Windows 10 Nvidia driver installed. When I uninstall the Windows 10 Nvidia driver, I get a error message, but I have tested it, and it does work to remove the driver. The Nvidia driver removes itself, but I have just reinstalled it after installing another game. The Nvidia driver removes itself automatically as it downloads and installs the driver. It appears to remove itself properly but it is not removed. After installation of a game, the window opens correctly and I receive the error. The window says that if I have any questions, please contact Microsoft Customer Support. When I message Microsoft, they do not respond. They just say that they have responded to my request. I noticed that after several installs of a game, I get a subsequent error. For example, after installation, I could get a (E1103) message. If the game was
