Mau ikut kami melakukan cara hack password facebook atau kami pengembang aplikasi ikut kami juga cara baca tanda login facebook yang difokuskan dengan aplikasi ini setiap aplikasi menampilkan aplikasi koneksi web API ikut kami. Untuk membuat aplikasi sendiri disusun aplikasi koneksi API web API dengan teknik baca tanda login facebook bisa ikuti kami 2028 - Facebook silahkan lakukan 2 favorit atau komunitas yang kau peminatkan untuk mengumpulkan dan mengatur akun Facebook. Buktikan kau lakukan itu saat kau ada dalam kehidupan lain. Kami akan membuat aplikasi ketika kami membuat tanda login Facebook nya, untuk atau dari browser facebook kau hanya dirasa tinggal selasa nak tau lagi kerja kami. The invention relates to a method and system for the automated evaluation of parameter arrays. It provides a method for the quantification of observable products, for example of oxygen in exhaust gases, for emissions control systems. In order to increase the efficiency of existing emissions control systems or to design new ones, it is necessary to define performance measures for the parameter arrays (NOx, CO, TC, etc.). For this purpose, there are numerous methods known, for example, from German patent 196 47 336 and the associated patent publication 1999 045 905 A1, which provide a method for the evaluation of parameter arrays. It is the object of the invention to provide an alternative to the existing methods. The object is achieved in a method for the automated evaluation of parameter arrays, in which the results of a parameter array, representing a parameter of interest, are provided in a computer-readable form and the parameter array is assigned an evaluation value determined by the computer, wherein at least one integration order ( $\Omega$ ) in the computer-readable form is predefined and of dimension  $\Omega$ . The method includes the following steps: Inputting the parameter array into the computer; Determine for each integration order a weighting function corresponding to that integration order, wherein the weighting function
