When I click on it it just opens the Internet Explorer. I have double checked the URL and it appears to be correct. I am downloading the keygen.rar using chrome, and I have already tried downloading with firefox and IE. Chrome and firefox both just open the internet explorer. I tried downloading the keygen.rar using Safari, and the download.exe opens. So it does work using safari. But I can't use chrome to download the file because I can't download it. The file is also available from the site. It is the same file. I am using Windows 8.1. Thanks for any help. Phil EDIT: I have got it downloading now. I had to use the command prompt to do it. A: It is not the link that is wrong but the download.exe inside the.rar file. I solved it by opening the.rar file from notepad and changing the url address to the actual url. It downloaded the file correctly. NIDD
