View Larger Map Toulouse, March 22 (MENAFN) The first French NGO Medical Witnesses by Peripheral Blindness has promoted the study of the first French NGO Medical Witnesses by Peripheral Blindness, "Medical Witnesses by Peripheral Blindness" to the Association of Health and Social Services (Assistance et Services Sociaux) in Toulouse. The study has noted the action of the Association of Health and Social Services, Assistance and Social Services in Toulouse and her commitment to assist the blind and their families through their partnerships. The study also talks about other countries experiences of medical witnesses. The study proposed that the experience of medical witnesses is a means to facilitate the establishment of clinical recommendations and the social aspects of the blind people. Also, the NGO said that the study could show the country the experience of many other countries in the world. At the end of the study, the NGO Medical Witnesses by Peripheral Blindness proposed the development of a National Health Policy that does not deny the need to implement the medical witnesses and, in this case, the implementation of medical witnesses at the Health Services. Peripheral vision is defined as the ability to see that which is less than 1°. This vision helps to "see more and more." and "see things that are close to us." (MENAFN)
