Nov 20, 2566 BE "GUIMiner" by Karan Singh - a portable freeware Any Scrypt Litecoin Miner based on Any CPU/GPU. KXDE Keymap Editor KXDE Keymap Editor is an application for creating and managing keyboard layouts. It is inspired by Windows' Keyboard Input Panel, and is the preferred standard for Linux keyboard layouts. It allows the creation of simple layouts that can be used to simulate different keyboard mappings, and it also provides all of the layout management functions of a typical Windows keyboard layout. It provides automatic configuration, export and import of all layouts, and includes many other features. References External links Category:Free input method editors Category:Input method editorsThe present invention generally relates to the field of transportation and shipping, and more specifically to a container having a lid that does not require a knob for opening. For transporting material, such as bulk material, it is important that the material not spill. For example, if a bulk container of material is dropped and a portion of the container is shattered, the material inside the container may be spilled and spilled material may be contaminated. To prevent the material from spilling, a lid with a top opening may be used. As an example, a bin may be used for containing bulk material. When the bin is full, a lid is used to close the bin and prevent the material from spilling when the bin is moved or placed on a pallet for transport. A conventional bin lid may be opened by pressing on the top of the lid with a finger, with a key, or with a knob. However, there may be issues with these lids. For example, a finger or key may be contaminated and inadvertently be used to open the lid. In addition, the lid may be inadvertently opened when the container is loaded onto a pallet. Accordingly, there is a need for a container lid that does not require a knob to open. There is also a need for a container lid that does not require a finger or key to open. The present invention 2d92ce491b
