AutoCAD is one of the most popular CAD tools in the world and is widely used in industries such as architecture, engineering, and manufacturing. It has over 20 million users worldwide, many of whom use the software on a daily basis. It has been developed to provide users with tools that help them create drawings, electronic bills of materials, and installation instructions in their everyday work. History AutoCAD was first introduced in December 1982, as a CAD program for the MS-DOS operating system on the IBM PC XT. The first public release was on January 1, 1983, and the program was dedicated to user Hans Bergsten of Concept Telematics A/S in Odense, Denmark. The word "Auto" was chosen as the name for the program because it supposedly meant "automatic" in some German-speaking countries. However, the name was misspelled as "Autocad" because the original developer, John Walker, was using an early version of Windows that did not have an Autocad-specific command-line option, so he pressed the wrong key. Later in 1984, the program was ported to the Apple II personal computer and extended to include modeling and automatic feature insertion. The first release of AutoCAD for the IBM PC was released to the public in January 1983, with an initial price of \$3,995.00. The program was aimed at architects and engineers. It was originally released only for the IBM PC but was later expanded to the IBM PC/XT, Apple II, and Apple IIGS. Later, in March 1989, it was ported to the CP/M-86 operating system. In July 1983, Autodesk was incorporated in California as a wholly owned subsidiary of the Walt Disney Company. The name was chosen because the word "Auto" was a popular one in the company's marketing strategy. With the first version of AutoCAD, Autodesk initially provided users with the full version of the software for a royalty-free three-year period; this was later changed to a year and a half, and then to no more than one year. AutoCAD Core An extended version of AutoCAD called AutoCAD Core was released on June 6, 1984. The version included a revised interface and a more extensive library of standard components, including doors, windows, columns, and ladders. Unlike the earlier versions, the new version required MS-DOS version 3.2. It was

In 2004, Mitt Romney urged his fellow Republicans to vote for John Kerry (left) over George W. Bush, resulting in a landslide victory for the Democrat. In a political year marked by unprecedented confusion, uncertainty, and contempt for traditional political wisdom, a truly legitimate question has emerged: What happens when the GOP has three candidates with no real political baggage, and only one conservative? In a normal year, the question would be whether the one conservative can prevail. In a year in which the voter support for traditional Republicanism is at an all-time low, the question is whether the establishment GOP can rely on the same formula that failed in 2012. In the next week, a new poll will be published that should confirm that it is a genuine question. The question, though, isn't whether the "establishment" GOP will prevail. Rather, it is whether "the establishment" will prevail. That's a little bit of a difference, but one that's easy to grasp. In the original context, the establishment referred to the old guard of post-World War II politics, which was the conservative wing of the GOP. It is that historic wing that represents the business and financial interests of America and the vision of traditional a1d647c40b

Seahawks defensive coordinator Kris Richard (left) and secondary coach Brandon Browner (right) are defensive darlings on the current edition of HBO's Hard Knocks. On Sunday, Richard and Browner were given jobs as coordinators of the show. Is there any wonder why both are back? "That's a long story," Richard said after the 32-24 victory over the Tampa Bay Buccaneers. "But it's a great opportunity. It's a once-in-a-lifetime opportunity for Brandon and myself. It's nice to have an opportunity. It's something we've worked for, and we're excited about it." This wasn't Richard's first turn on Hard Knocks. He served as a defensive assistant for the first six episodes of the 2009 season, which focused on the then-Atlanta Falcons. Then he left to become the defensive coordinator for the Saints in 2012. His coaching resume includes stops in Cleveland, Denver, Philadelphia, Detroit and Baltimore. Richard was named defensive coordinator of the year by the Associated Press in 2011. Browner, meanwhile, is a six-year veteran of the NFL. He spent last season with the New York Jets. Before that, he was a safety in Indianapolis, Seattle and Atlanta. "I was born and raised here," Browner said. "They know I want to come back here and finish my career and to be
