will allow you to monitor all the process it is running. The utility will run any Windows command at a set time interval or delay. The TSR Timer will do this by executing a command line utility named Autorun.exe in Windows XP. If Autorun.exe is

not found on your system, it will search for it in several locations. By default, the utility looks in the following locations: • [autorun.inf] • C:\WINDOWS\System 32\autorun.exe • [autorun.inf] • [autorun.ini] • C:\WINDOWS\Microsoft.NET\Fr

Network monitoring
software for NetGong.
NetGong is a software
utility that was built in
order to help network
administrators,

webmasters and any curious person to monitor any IP address or host and receive notifications when the a connection fails. Quick installation and easy-to-use interface The setup process you are required to go through is a piece of cake, as it does not

present you with any
unpleasant surprises and
does not take too long.
After you finalize it, you
come by a simple and
clean interface which
only consists of a menu
bar, a few buttons and a
tabbed pane in which to
display all the
connections being

monitored. In addition to that, extensive Help contents are provided, thus ensuring that all user categories can work with NetGong, including those with little or no previous experience with computers. Set up connections to monitor and various types of

alerts This software program enables you to add a large number of connections to monitor, by simply inputting some related information. To be more accurate, you have to specify the host address, a short description (optional), the time interval at

which to ping and ICMP settings (timeout, retries, packet size). It is also possible to verify a specified TCP or UDP port and set up audible alerts by selecting a WAV file from the HDD, as well as e-mail, message or file notifications. Events can

be viewed in another tab along with details such as type, time, host, description and status. Conclusion To wrap it up, NetGong is an efficient piece of software, dedicated to all user categories interested in monitoring a specified Internet connection. It

does not hamper the system's performance, all tasks are completed in a swiftly manner and there are sufficient options to keep you busy for a while.

KEYMACRO Description: Network monitoring software for NetGong. NetGong is a

software utility that was built in order to help network administrators, webmasters and any curious person to monitor any IP address or host and receive notifications when the a connection fails. Quick installation and easy-to-use interface The setup

process you are required to go through is a piece of cake, as it does not present you with any unpleasant surprises and does not take too long. After you finalize it, you come by a simple and clean interface which only consists of a menu bar, a few buttons and a

tabbed pane in which to display all the connections being monitored. In addition to that 1d6a3396d6

NetGong is a simple monitoring and alerting software that monitors the connections made to your network, reports information about the host, connects to websites, allows you to check the HTTP and
