The core of ThreeDify Designer's technology includes: * a three-dimensional texturing engine that converts high-resolution (32-bit) texture images into CGAL-based 3D models. * a two-dimensional polygon manipulation engine that allows users to extract 3D models from 2D images. * a powerful Polyline/Polygon software stack that allows users to cut and join 3D lines and polygons. * an easy-to-use 2D and 3D primitives editor that allows users to draw models with the pencil tool, trim primitives with the clip tool, turn the bounding box into a 3D box (a box with 360 degree or 180 degree interior angles), and measure 3D models with the powerful 3D dimensions that include X-dimension, Y-dimension, Z-dimension, radial (angular), point-to-point and point-to-face dimensions.
