Large Text File Reader [Mac/Win]

This lightweight software enables you to open large text documents within a fraction of a second. It does so by opening only a specific number of lines, in order to prevent Windows from hanging and crashing. Up to 10GB size is supported. It is packed in a single executable file, so you can run the tool from any location on the disk or from a USB flash drive. The program was written with .NET Framework in mind, so it requires .NET Framework installation. No setup is needed for the tool. You'll have to put the executable into a folder, however. Simple interface for viewing large text files It does not put a strain on the computer's performance, as it does not use a lot of CPU and RAM. No additional files are created on the disk without your permission. The program doesn't make any changes to the Windows registry. A handful of options are available, allowing you to locate and open a text file, and set the number of lines to view, among other things. Simple user interface. The program was tested successfully on Windows 10 Pro. Windows Defender Firewall False Positive Explanation These random false positives show up as both "Network connections" and "Miscellaneous" in the list of possible exceptions, meaning that it's a Windows Defender false positive. To top it off, the only way to get rid of the problems is to disable the Windows Firewall. Usually, this problem can be easily avoided by unplugging

Ethernet for a while, as this disables Windows Defender. However, our gamer set up does not have an Ethernet port available, so we were forced to disable the Firewall. In any case, here are some quick steps on how to get rid of these annoying false positives. 1. Open "Notepad" and type the following: netsh advfirewall firewall deleteexception 431 addressFamily LocalAddressLocalPort netsh advfirewall firewall deleteexception 431 addressFamily RemoteAddressRemotePort 2. Restart your computer and try to open the website in question. If the problem still persists, a "bug" report will be placed on our form, so we'll get in touch with you in a few days. Free Download Price Full Version Free Review About Large Text File Reader is a lightweight software application designed to open large text documents to show their contents. It does so by opening only a specific number of lines, in order to prevent Windows from hanging and crashing. Up to 10GB size is supported. No setup required, besides .NET Framework The whole program is wrapped in a single executable file that can be saved in a custom location on the disk, in order to seamlessly launch the tool. Otherwise, you can keep it stored on a USB flash drive to run it on any PC with minimum effort. However, you must have .NET Framework installed, since it was developed using this platform. No additional files are created on the disk

without your permission, and no changes are made to the Windows registry as a direct consequence of using this tool. Simple interface for viewing large text files It's packed in a user-friendly interface represented by a standard.NET Framework form that doesn't put emphasis on graphical elements. It lists a handful of options, enabling you to locate and open a text file, set the number of lines to display, and view contents. Although there are no buttons implemented for copying data to the Clipboard, printing or exporting it to file, you can select text and copy it using the global hotkey or by opening the right-click menu. There are no other notable options available here. Evaluation and conclusion It worked smoothly in our tests, without freezing, crashing or showing errors. We haven't come across any stability issues. As we expected, it didn't put a strain on the computer's performance, running on a low amount of CPU and RAM. Large Text File Reader Features:

- Open a text file containing a large amount of data
- View only a specific number of lines from its contents
- Not a stand-alone product, but a launcher for.
