This tool scans the embedded images for three run-time licenses: • Core • Professional • Professional Plus The tool assumes that the embedded image is built under the new Core run-time license structure. If you are building an image using the original binaries found in the Windows CE 5.0 SDK, you may find that certain features in your image are no longer eligible for the Core run-time license. To avoid this scenario, create a new build of your image under the new Core run-time license structure using the windowsce5_sdk_template.zip file in the Windows CE SDK 5.0\Source\Tools\Windows CE SDK\Target folder. NOTE: The Windows CE.NET 4.2 Run-time Assessment Tool is an entirely new tool. If you are using the Windows CE.NET 4.2 SDK instead of the Windows CE SDK 5.0, you will not find this tool in the Source\Tools folder. To ensure proper function of the Windows CE.NET 4.2 Run-time Assessment Tool, please follow the steps below: • Ensure that you are using the Windows CE.NET 4.2 SDK instead of the Windows CE SDK 5.0 • Ensure that the Build\CEConfig.h file is generated in the Windows CE SDK for your chosen build configuration • Ensure that the files ZKMM\zinclude.h and ZKMM\zlib.h are included in the zlib folder of the Windows CE SDK for your chosen build configuration • Ensure that the contents of ZKMM\include\zwindows.h are included in the zwindows.h folder of the Windows CE SDK for your chosen build configuration You can also use the tool to easily determine which features they included in their operating system image that may make their image ineligible for the Core run-time license. Once the output file has been generated, you then have the option of removing or maintaining the Professional or Professional Plus components. NOTE: To have this tool function properly you must run it under Windows CE 5.0 or Windows CE.NET 4.2. 3. Search the internet for any Windows CE 5.0 SDK made by your device manufacturer for how to build your custom OS image to use the Core run-time license. 4. Compare your custom OS image to the Windows CE 5.0 SDK to ensure that the contents of the zwindows.h folder are similar, but the

The Windows CE 5.0 Run-time Assessment Tool Crack will assess any components you included in your image, and it will only determine what license category you fall under. You can use the tool to determine if your image has any components that are not compatible with the Core run-time license structure. The tools assumes you are building an image under the new Core license structure; therefore, it will provide an output file of any components included in the Professional or Professional Plus run-time license. You can then delete or maintain any other components. The tool will not determine what license category you fall under.
