Field of the Invention This invention relates to an apparatus for transmitting and receiving an optical signal and a method for the same. 2. Description of the Prior Art It is known to transmit an optical signal via an optical fiber cable having the fiber-optic cable sheath in place on a water-filled line, such as a river, which is an optical-communication line or a communication line. In a conventional apparatus for transmitting and receiving an optical signal, light which has been output by a laser diode (LD) as a light source (also referred to as an optical signal) is condensed by an optical lens or the like so as to become small light spot. The small light spot is incident on an end surface of the optical fiber cable as part of light reflected from the optical fiber cable which has been reflected from the end surface of the optical fiber cable of the fiber-optic cable sheath. The optical fiber cable which has reflected the optical signal impinges on the LD again in the reverse order, that is, the optical fiber cable is reflected by the LD in the reverse order. Accordingly, in this case, the optical signal reflected from the optical fiber cable is directed back to the LD. Since, however, the LD does not generate light at all times, there is no optical signal output by the LD when the optical signal is sent to the LD. Although the conventional apparatus for transmitting and receiving an optical signal provides a

Girlsense Tune Player Crack+ [Win/Mac] Latest
