Jun 19, 2016 This site needs to be upgraded to the .NET Framework 3.5 or later, which is already installed on this computer. Jul 13, 2020 Hi all, Im using CrystalReports 12.5.0.29 on my development machine, and its running on my 2012.4 R2 desktop. Jul 13, 2020 I need to use crystal report 10 on a asp.net application using.net framework 1.1. I have VS2005 and do not have.net framework 2.0. I tried using the msi installer but it does not detect that I need to have.net framework 1.1 to use crystal report 10. Can you please help me how to resolve this? Dec 7, 2016 After installing CR XI on a machine that has.net framework

Download

Sep 16, 2009 I have a customer with a problem deploying a.net 1.1 application on a windows server 2003 machine. I found that there was some sort of conflict with the.net 1.1 framework and or msvc redistributable. I can't figure out which one. I don't understand because all the MS release notes for the msvc2003 redistribution download page say that it will work for.net 1.1. Any suggestions for this customer would be appreciated. Thanks. Download.Net Framework 1.1 Oct 13, 2007 I have a client with an older application that uses.net 1.1 on a server machine running Windows Server 2003 and IIS 6.0. I tried installing.net 2.0 with IIS and this has caused a problem with my application. I'm not able to display the crystal reports. What to do? I need to fix this problem or can I use another Crystal Reports runtime? A: Install.NET 1.1 runtime. I think you can still use it on W2K3. Q: How can I lock my thread in UWP app? I have a list of items which I'm trying to access at the same time. I can display the elements one at a time, but if I try to display them all at once, the app freezes. I tried to lock the thread when using the await operator, but it's not working. Is there any way to make my app run smoothly? private async void Page_Loaded(object sender, RoutedEventArgs e) { string userId = await GetUserId(); var companies = await GetCompanies(userId); foreach (var company in companies) { ListViewItem lvi = new ListViewItem(); lvi.Content = company.CompanyName; //This line locks the thread when displayed, but freezes my app if //it's displayed all at once. await ListView.Items.AddAsync(lvi); //Works fine when displayed one at a time. } } public async Task 54b84cb42d
