According to the company, "AutoCAD is the leading desktop-based two-dimensional drafting and design software solution for architecture, engineering, and construction. AutoCAD is the most widely used 2D drafting and design software solution in the world, used by more than 100 million users around the world." It was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is known for its compatibility with older software, which requires that all programs and data be compatible with each other to ensure that the user is not "locked out" from using older software when upgrading to a new version of AutoCAD. AutoCAD is also known for its extensive feature set. AutoCAD may be used for computer-aided design, engineering, drafting, and visualization. Rival programs include Microstation, Microstation64, and CorelDRAW. There are also many other software programs that can be used for 2D drafting and design. AutoCAD and other CAD programs are often used in other design disciplines, such as interior design, landscaping, interior decoration, electrical engineering, plumbing, mechanical engineering, architecture, healthcare, CAD software design, architecture, construction, and other technical fields. Most people do not need AutoCAD. The vast majority of AutoCAD users are architects, engineers, builders, and other professionals in the construction industry. However, in its early days AutoCAD was used for all manner of design, construction, and other engineering applications. .NET All features of AutoCAD 2010 are available in.NET. Autodesk also released a new.NET API, which allows adding some more functionality to AutoCAD. This is not a replacement for AutoLISP or Visual LISP, but an addition to it. This new API, called "core", is to provide a simplified and safer API to build applications for AutoCAD on Windows platform. VBA To ease the transition to AutoLISP, in AutoCAD 2008 and 2009 some of the AutoCAD functions and commands are available in VBA in addition to AutoLISP. Users can edit 3D drawings, convert DWG to DXF, annotate drawings and create custom views. AutoCAD 2010 has more VBA functions to allow users to create applications that will enhance their AutoCAD experience. Visual LISP AutoCAD Visual LISP is based on the Visual LISP programming language. It is used to build plugins that extend AutoCAD's functionality. It supports a range of graphical controls that control AutoCAD functions. For example, there are many events that are triggered by a mouse movement. Visual LISP provides two ways to detect mouse movements and to handle the corresponding events. These include using mouse hooks and user-defined events. VBA AutoCAD 2009 and later versions support the development of VBA applications, which can be used to automate drawing, editing, and analysis of drawings. The VBA API is made available to users via Visual Studio.NET. The AutoCAD VBA API provides developers with the same drawing and editing functionality as Visual LISP. Additionally, the VBA API for AutoCAD allows developers to create user-defined events, and to load and save drawings to the Microsoft Excel workbook format. .NET AutoCAD 2010 has a new.NET API, called "core", which was designed to offer simplified and safer development. This API is the foundation for AutoCAD 2010 "integrated" applications, which were not available before AutoCAD 2010. This new API supports AutoCAD 2010 specific commands, functionalities and actions, in addition to the previous VBA and.NET add-ons. JavaScript AutoCAD 2010 has made JavaScript a standard component. It supports JavaScript commands and functions. JavaScript can be used to develop dynamic user interfaces, creating an interactive dialog. .NET API Auto 5b5f913d15
