Cpukiller3 PC/Windows

Keymacro is a simple Windows keyboard macro recorder program. With Keymacro, you can assign hot keys to actions that will automatically be performed when you press hot keys in Windows. Most of the macros created with Keymacro can be saved as files, and can be replayed later. Keymacro can be used to create macros for actions as diverse as opening files, surfing the Web, launching applications, and much more. Keymacro can record several simultaneous macros, and is capable of sending messages through the X Windows system. Features: Create new or edit existing macros Automatically start new or edit existing macros Automatically save macros to an external file Automatically send a message through the X Windows system Automatically launch files, URLs, or applications Automatically restart macros Automatically load previous macro Automatically load a particular macro Automatically start a particular macro TDLiNDROME Video Player is a small Windows application that allows you to display and view videos and other files contained in an MP3 or WAV media file. The player can be used as a fast and easy video

player for editing video files, viewing video clips, or playing video games, and is especially useful for Windows 98 users. Supports HD and DD formats This Windows application can display videos in 720p HD and 480p DD video formats. In addition, it has the ability to convert video files into other formats. Key features: Saves your preferences for future sessions. Allows you to specify the size of the window. Allows you to play a specific frame from your video file. Can be used to easily play video games. Allows you to select various options and settings. Allows you to directly view video files. Allows you to view video files on your hard disk drive. Allows you to view video files on your memory. Allows you to view video files on your local USB hard drive. Allows you to view files in various formats (MPEG, MPG, DAT, MKV, AVI, VOB). Allows you to view audio files. Allows you to use the video player to edit a video file. iValuator is a simple program for measuring the value of coins, bills, stamps, etc. This Windows application allows you to record the value of your currency in the form of a cash register tape. After recording a transaction with iValuator, you can view the saved transaction data, as 80eaf3aba8

Cpukiller is a very easy-to-use application that lets you monitor and control your system CPU speed. Cpukiller does not limit the performance of your computer and is not intended to be a serious program. However, Cpukiller is a very useful application that can help you slow down your CPU if you want to run old PC applications or games. If you are running Cpukiller on a dual-core PC, the application can be set to run only on one core. The application can be set to run on a single core for those computers that have only one processor. What's New in This Release: Version 1.0.1 - Bug Fixes and Improvements Ratings Details Cpukiller provides you with a way to slow down your processor in order to ensure computer compatibility with older games and applications. With its help, you will be able to run such legacy software on your newer PC. CPU usage monitoring and speed slow down The application displays a graphical representation of the CPU usage within its main window, alongside detailed information concerning the CPU vendor and other technical specifications. The slow down factor can be changed using the embedded slider, which gives you the freedom to adjust the speed value to the requirements of the program you want to run. Generate presets to load configuration settings faster One important advantage of the application is its ability to create presets for launching certain applications at specific speeds. This saves you the effort and the time needed in order to repeatedly adjust the slow down rate and browse for the target application. For your convenience, each preset can be assigned a hot key, which means that you can activate Cpukiller with a key combination. Also, you can instruct the application to close upon program launch or minimize itself to the system tray, in order not to interfere with your work. A quick way to slow down your CPU Cpukiller relies on a multithreaded slow down method, offering you the possibility to switch between the time controlled algorithm and the so-called 'greedy' algorithm, which was implemented in an older version of the application. Featuring multiprocessor support, Cpukiller is capable of helping you launch older applications that might not be compatible with recent system configurations. Please note that even with its help, some of the programs or games you want to launch might not work properly. Some of our site stores do not support

Cpukiller - CPU usage monitoring and speed slowdown. Cpukiller is an intuitive and easy-to-use application designed to help you adjust your PC to suit your needs. It is a highly configurable and multithreaded application that can help you slow down your processor in order to improve compatibility with legacy programs or games. Cpukiller increases the performance of the user's CPU, helping you use all the processor's power at its best, allowing you to fully utilize your new system. Cpukiller 3 is the latest version of this product. Changes in Cpukiller 3: The application now has a graphical representation of the CPU usage within its main window. You can easily see the current status of the CPU and the components that are consuming its energy. Besides that, the display window of the application contains other useful information, such as CPU usage history, the brand of the CPU and its model number, your processor speed and the current CPU usage percentage. New features in Cpukiller 3: - Introduction of the smart mode, which can help you manually reduce the processing speed of your CPU, or help you speed up your system, by applying various speed reduction rules. - A handy auto-run menu, which can be used to launch the application with preset values. You can choose your favorite preset and launch your chosen applications by pressing one key. - The new task manager, which allows you to launch applications you want to run at a specific speed by creating Cpukiller presets. - The timer feature, which can be used to define a time for the application to open. - The ability to change CPU display colors, adjust contrast and brightness. - The ability to work with all types of CPUs, both Intel and AMD. Cpukiller 3 features: Cpukiller 3 has an integrated CPU usage monitor and a speed slowdown feature, enabling you to adjust your system to suit your needs. Besides that, the application provides you with a number of useful features, such as a pre-defined startup menu, the

ability to change CPU display colors and adjust contrast and brightness, and a handy timer. You can also manually reduce CPU speed using the available smart mode, and you can create your own presets to launch an application at a certain speed by simply setting the timer. Cpukiller 3 is able to run on all processors, including Intel and AMD. Version 4: Cpukiller 4 is the latest release of this software, which contains some improvements to make your experience even more convenient. Changes in Cpukiller 4: This latest release of the application includes improved performance and a graphical user interface. Cpukiller 4 is not only faster than the previous version, but it is also easier to use and more intuitive. It has a sleek and easy

System Requirements:

NOTE: Running this mod on Xbox 360 requires a USB Gamepad. READ THIS BEFORE PLAYING!
