### What's New In?

Welcome to the CharacterNavigator application. I designed this tool with the same purposes as its competitor programs: to copy any character of any font into the clipboard by a simple mouse click or key pressing. CharacterNavigator is designed to be a freeware, so it doesn't contain any spam advertising. There is a built-in "Settings" page, which allows you to change all colors and sizes, which are saved for the next time usage. In case you don't like the default settings, please, feel free to change them via this page. There is an opportunity to change all colors and sizes, which are saved for the next time usage. To copy any symbol into the clipboard, you may just leftclick on it or press "enter" key, when the symbol is selected. Keyboard navigation. Use the keyboard arrows to travel between the font symbols. To change the focus from character grid to font combobox and backward use Tab key. To preview the selected symbol use "+" and "-" keys on the numeric pad of your keyboard. Press "enter" key, when you want to copy the selected character into the clipboard. If you don't like to change all the settings for each new application, please, just copy the following text into the "Settings" page of this application: If you find any bugs or errors, please, report them via this page. Please, find the "Help" page here, if you are searching for help on how to use this application. Please, feel free to change the text and colors on this page. Reviews of Character Navigator Rated 3 out of 5 stars Posted on 1-26-2017 Very nice. I use a keyboard to navigate. Not very user friendly for some people. I like the ability to change the order of the characters and include special characters if that is what you need to do. Posted on 9-16-2017 What's New in Version 1.0.2 - Fixed issue with W8.1.0 and the beta version. - Fixed an issue with the hotkey functionality. - Made some code improvements to make the program more stable.1. Field of the Invention The present invention relates to the elimination of the transfer of water vapor between the fuel cell and the anode in an electrochemical fuel cell. 2. Description of the Prior Art Fuel cells are well known electrochemical energy conversion devices that convert energy from a hydrogen-containing gas and an oxidant gas to electricity. The oxidant gas is typically oxygen, while the hydrogen-containing gas is typically methanol, which is often used in a vehicle application. These type fuel cells, known as polymer electrolyte membrane (PEM) fuel cells, operate by passing hydrogen-containing gases through the catalyst and electrochemical membranes of the fuel cell.
