Trump's presidency has been a one-way road of self-sabotage, and the G7 leaders are sick of it. Vladimir Putin is, on the other hand, enjoying watching Trump destroy his reputation, as well as that of the current American Administration. ### What's New in the?

VCDGear was written to be an all-in-one, easy to use, video coder. VCDGear will convert VideoCDs to standard video streams that can be played in almost all common video players. You can convert VideoCDs to unencrypted AVI/OGG streams to play them in any web browser. By using a VideoCD, you can not only save bandwidth by transferring fewer bytes, but also improve the audio/visual quality of your VideoCDs (CDs created by the UltraCD program). If you want, you can batch convert your VideoCDs to VCD on your hard drive with the VIDEOCD.EXE or create a super video CD. It is designed to be a simple and powerful CD image encoder and decoder with the ability to correct the CRC errors of all video streams found on both unencrypted and encrypted VCDs, and I have been informed that it can correct other errors as well (for more information see VCDGear FAQ). VideoCDGear Features: 1. The VCDGear GUI allows you to check what will be converted, extract, correct, batch encode, convert, and burn VCD image and SuperVideoCD. 2. You can add your own VDIFF files (contains a list of VideoCDTrack# & TrackName), VCD videos (contains a list of VideoCDFile & FileName) and/or a list of your saved CD images (contains a list of WavPack2Files & WavPack2FileName), 3. You can configure and control it using command line console. 4. You can choose to include the (Super)Video CD inside a custom.VCD image, so you can have a customized (Super)Video CD. 5. You can configure to correctly encode CRC errors in all video streams found on encrypted VCDs. 6. You can use the UNISUREHEADER or the preset version. 7. You can burn the VCD image on a default media (like VCD, CD, DVD-RW) or on a user-specified media. 8. You can specify which audio and video streams will be embedded into the VCD image. 9. You can capture the entered text commands to scriptable commands and exports the entered text to \*.BAT
