Keyboard Shortcuts: If you use a mac keyboard, you can find a lot of useful shortcut key combinations on your keyboard. And when you press them, they are very similar to the keyboard shortcut that you would press on your computer (if you have no touch pad). You can customize this utility according to your liking. The only difference is that instead of pressing a key combination, you have to press the hotkey on your keyboard. How to use KEYMACRO: You just have to install the application from your Applications folder, launch it and select a keyboard shortcut. You can also change the Hotkey of the keyboard

You can use any standard keyboard shortcut, or you can enter a shortcut combination. You can define your hotkey and use it at any time during your workflow. You can also create an action extension. You can add the action extension to any application and use it at any time you want. You can group an action extension with other actions into one extension. You can have a dedicated keyboard shortcut to open an action extension or a bundled action extension. You can assign a hotkey to an action extension, making it easy to open the extension at any time during your workflow.
