KeyMacro software enable users to record short keyboard events and macros by saving them as keyboard shortcuts to their own set of definitions. It features a very powerful set of shortcuts with unlimited record and repeat ability that is easy to use and never out of date. It is suitable for all types of users whether you are a home user or business user. It is also suitable for situations where you need to quickly access frequently used commands, or to copy and paste a specific set of text to and from a document. It makes it easier to perform a set of commands instead of typing in an instruction, or in other words, to automate tasks. KeyMacro can be easily configured to your working needs, as its powerful features and functionality allow you to create your own set of macros to perform any task you need. So once you have made the set of macros you need to perform, just call them up from the menu and they will be assigned to key combinations. KeyMacro allows you to write your own custom macros, and use your own names for them, rather than just an alphabetical list of every shortcut. It can be configured to work for any number of keyboard buttons. And it allows you to use different keyboards at the same time. You can assign macros to any keyboard button, or only some of them, with each key combination being assigned a new macro. KeyMacro can be assigned to any keyboard button. A set of shortcuts can be added to your KeyMacro profile, and then you can call them up from the menu. You can define the number of repeats of each macro, which means that each shortcut can have as many repeats as you want, but it is still just one shortcut. You can also define the number of repeats for a sequence of commands, where the shortcuts can be called up in a sequence. KeyMacro supports a feature which automatically saves any changes you make to your shortcuts, including all the current key combinations assigned to macros. This helps to prevent you from having to remember to save each change, which can often be forgotten when performing a long string of commands. KeyMacro automatically assigns shortcut keys to each menu item so that you can just press the key combination to bring up the menu. You can even change the shortcut key to something other than the standard Windows shortcut key (for example, Alt-Q). This means that you can call up the menu from anywhere on your keyboard and you do not have to always look at the keyboard or mouse, which makes working easier. Key 1d6a3396d6
