It's an application that allows you to convert digital hemispherical photos into wide angle digital pictures. To search for an application on CNET, I have to pay $80/yr. to participate. I don't have the money to do that. Why can't the CNET site produce it for free? Keyword search can be found on the internet. I don't think they should have to pay for CNET. But I can't find any keywords that people are searching for. I looked a bit at CNET's logo, and it's more of a business directory. It's not like I can give people a reason to want to use CNET. Anyways, what do you guys think? Do you use CNET as a search engine? Click to expand... I have used CNET for about ten years, and I still find myself just looking at their "What's New" section. How many times have I read the words: "Do you use CNET"? They are a business site and not a search engine. A search engine is something like Google.
