The option of using the USB connection allows the user to quickly and easily work with MIDI devices while taking advantage of a larger number of connected MIDI devices. The software has a new function of converting the device's coordinates into MIDI note information. This is based on previously entered intervals. This means that if you change the position of a device, the new position

can be immediately translated into MIDI notes. Keyboard programs can be assigned to a single MIDI controller, can be assigned to all MIDI controllers and can even be assigned to a MIDI controller in the system, such as a computer's keyboard. MIDI input options The KEYMACRO has an expanded set of MIDI input options, in order to allow the user to easily control external MIDI devices. All options provide the ability to control different types of devices. The most commonly used options are for piano keyboard, drum machines, x-pads and synth module control. The combination of

Create your own sounds using the classic ARP 2600! Play with a 12-voice synthesis engine and build your own sounds using modulation, arpeggiator, effects, and even a sequencer. Make your own unique patches by dragging and dropping modules and arpeggiators onto the synthesizer. Set the synth to human-sounding attack, release and decay times to get the best sound for drums and percussion. Use the two modulation destinations to send this sound through a compressor or to

drive a subtractive synthesis signal through the filter. Send the output through a distortion effect or use the envelope follower to drive a wah pedal. Use any of the 16 effects to sculpt your sound from simple distortion to saturation. Add reverb to the sound, or use the delay effect to create stunning effects. A sequence editor lets you play your sound forwards or backwards, with a small portion of a mix or from start to finish. Bring the pads up and play, or use the sequencer to play a melody. You can even use the sequencer to warp the sound. The cool effects are

also available with each note; use the envelope follower to add reverb or the distortion effect to change the sound. The ARP2600's convenient design lets you select and mix from more than 16 classic sounds and effects. Even with just a few notes, create drums, bass, brass, strings and vocals using the sequencer. To make your sounds richer, you can manipulate the settings of more than 40 modulation destinations. Plus, you can change the sound of the ARP 2600 by using the filter, wah, effects, and distortion effect. The ARP2600 V3 includes 8 presets of drum and percussion

sounds, 4 presets of bass sounds, 16 presets of music and 3 presets of modern instruments.
