Built-in wizards to make drawing tasks easier: The command line has its own powerful set of wizards for quickly drawing (and modifying) objects, entering descriptive text, drawing lines, modifying curves, measuring and modifying dimensions. Via the drawing and command tabs of the ribbon, users can access wizards that assist in drawing (printing, saving, working with layers, and other functions). The Command History function allows users to execute previously entered commands, making them easy to re-enter. The Quick Tools function provides access to a menu of commonly used tools, including tools to create text, rotate, modify dimension, and select a group of objects. The Palette function allows users to create and modify the appearance of objects.
