Mac OS X Mac OS X versions of AutoCAD contain several different methods for handling layers, importing and exporting layer information, and other features. A number of AutoLISP scripts are included with AutoCAD. The layer management functionality was designed to support a wide range of workflow requirements and customization. Mac OS X Tiger Autodesk replaced MGL++ with a new AutoLISP implementation in Tiger. It allows you to easily create and modify AutoCAD objects in AutoLISP. The AutoLISP codes will be in a layer folder next to the AutoCAD files. AutoLISP can be used to program various objects, such as filters, and add the objects to the AutoCAD drawing. In this case, the codes must be in the AutoCAD drawing and not in a separate layer folder. Mac OS X Leopard AutoCAD for Mac Leopard contains a native 64-bit AutoLISP interface which can be used to add AutoLISP scripts to the Autodesk Exchange Apps. The new API allows code libraries to be exported and compiled into an.dylib for easy deployment. AutoLISP supports a number of features including feature templates, visual inspection of AutoCAD objects, and an interface to the built-in AutoLISP library. AutoLISP is written in CLISP, a dialect of LISP and is a proprietary, closed-source programming language and implementation, with the compiler distributed only by Autodesk and not publicly accessible. XS-Macros is a part of the Xref software suite. ObjectARX ObjectARX is the object-relational mapping for AutoCAD. It provides a C++ class library to map between the AutoCAD database and an object-oriented programming language (such as C++). During the AutoCAD 2010 launch, it was announced that AutoCAD would gain "the ability to store object-oriented objects into its relational database and the ability to retrieve those objects using ObjectARX". In the AutoCAD 2011 release, Autodesk announced that the ObjectARX interface would be integrated into AutoCAD with AutoLISP. AutoCAD History The AutoCAD History feature is a tool for easily recording changes, adding text notes, and saving drawings as they are saved. Originators The AutoCAD "originator" 5b5f913d15
