So I am really excited about this as it will help get rid of CPU based issues for those with Ryzen CPU’s, and I am sure you would appreciate that as well. There were multiple issues as a result of Ryzen’s SMT and Hyperthreading enabled. Even though this hotfix is a fix of an application issue, it will allow you to get rid of the the main issue being experienced by people running Cyberpunk 2077 on a Ryzen CPU. As such, I am telling people to install this hotfix and enjoy using Ryzen CPUs for Cyberpunk 2077 as this is my personal experience. And, as it is a hotfix, the chances of you encountering any issues or bugs after you install this hotfix is at 0%. The only issue you could face is the one I am experiencing, the full game crashing after entering the options menu, but this doesn't happen with this tool, or with other hotfix tools out there, which is a good thing, and for that I am appreciative for your support. This has resolved all my problems. And made me a happy person. In the event that this hotfix is downloaded from this website, I guarantee you that you will not encounter any issues as a result of using this tool. Note: This is a tool only, and you must make sure to download the game from either the official site or a trusted source.
