Join the club: China's first space hotel opened today A crew from Chang'e 4 land in a capsule at the Baykonur Cosmodrome on April 2. The mission is part of China's ambitious space program. Photo: CNSA A crew from the Chinese Chang'e 4 lunar probe has landed on the far side of the moon, marking a major milestone in the nation's ambitious space program. The Chang'e 4 lander touched down at 2.37 p.m. China time (11:37 a.m. EST) at the Baykonur Cosmodrome in Kazakhstan, the first time a spacecraft has ever landed on the other side of the moon. The landing was the culmination of more than two years of preparation and a projected cost of \$100 million. If all goes according to plan, a crew of three astronauts – including one man and two women – will stay in the lander for up to three months before traveling to the Earth's orbit. They will then return to the moon's surface to perform research into the composition of the lunar surface. The crew is expected to make its first moon landing in the next month.
