AutoCAD is one of the most popular CAD software products for drafting. However, AutoCAD isn't the only CAD software tool you can use for drafting. There are several free and commercial CAD software tools you can use to create 2D and 3D drawings. (See 'Free CAD Software Tools' and 'Free and Commercial CAD Software Tools'.) Uses AutoCAD for 2D drafting AutoCAD, like most CAD software tools, is used to create 2D drawings. You can create 2D drawings on either Windows or Mac OS X computers, both PCs and Mac computers, and both Linux and Unix-based computers. AutoCAD does not run on mobile devices. With AutoCAD, you can create 2D drawings in several different file formats, including DWG (AutoCAD's native format), DWF (AutoCAD's native format), DXF, and many others. Create a new drawing in AutoCAD Before you can create a 2D drawing, you need to open the AutoCAD drawing template files on your computer. You can download these files from Autodesk by selecting File > New from the menu bar. Click 'New' on the menu bar to open the dialog box. Click 'New from Template' to open the New from Template dialog box. In the template name box, type the name of the template you want to use, then click OK. If you have multiple templates installed, you can select one of the installed templates by clicking the template name in the menu bar. The template name in the menu bar changes to match the template you selected. Note: To use the 'Design' templates, you need to install Autodesk Design (formerly AutoCAD Architectural Desktop) and Autodesk Architectural Desktop. Autodesk Architectural Desktop and AutoCAD Designer are the only Autodesk CAD software tools that support Design templates. If you have multiple templates installed, you can use the one you want by selecting it from the list. In the template selection box, select the template you want to use from the drop-down list, then click OK. Click OK to open the New drawing window. Click OK to close the New drawing window.
