Why Use VB Code Editor? VB Code Editor is a simple-to-use software application that allows VB programmers to easily save to a folder all code snippets found while navigating the web, in order to view and apply them in various projects. It comes packed with just a few functions and configuration parameters, such as a search function. Quick setup and classical UI The installation procedure is a fast and easy job that doesn't need special input, thanks to the fact that it integrates familiar options. Once finished, VB Code Editor pops up a simple window with a plain structure, representing its interface. Manage VB code and configure settings So, you can immediately start editing code in the main application window and copy selected text to the Clipboard. It is possible to personalize the code color, show the Clipboard, refresh the code folders, as well as resort to a search function to locate a particular string of text. As far as general options are concerned, VB Code Editor lets you alter the highlight color and font type, as well as associate the program with .code files. Last but not least, you can ask the tool to automatically refresh the code file window. Evaluation and conclusion The software utility did not hang, crash or pop up error messages in our tests. It has minimal impact on machine performance, thanks to the fact that it needs a low quantity of CPU and RAM to work properly, and it rapidly executes commands without any issues. However, we attempted to run VB Code Editor on later Windows editions and failed. It seems that the app has some compatibility problems in this regard. We must also take into account that it has not been updated for a long time. Information, data and screens displayed are for general information purposes only. The application has a minimalistic appearance. As a developer tool, VB Code Editor enables you to edit code snippets for Visual Basic language. You can easily find code that you want to apply in your current project. Then, you can copy it to the clipboard and paste in the code window of your text editor. You can customize the code color, highlight, font, and search for a particular string of text. The application is built in such a way that it can be used in two modes: a classic interface and a simple, compact window. You can switch between them with the "View" button, and you can edit code in the main window. Disclaimer Videocardz.com is a search engine, it does not store any files on its server.
