
Apostila - PROFILO PELA EFEITO JOVEM

Can anyone please help me and tell me what's wrong with my code? Thanks! A: It is not clear what you are trying to achieve with your code. But you should not use any additional indents and just write the loop in one line: while x. A possible role of lipid peroxidation in the tumoricidal action of diphenyl diselenide. It has been shown that the addition of a 1-0.1 mM concentration of diphenyl diselenide (Ph₂Se₂) to an outgrowing cell culture of human mammary carcinoma MCF-7 leads to a considerable increase of malondialdehyde (MDA) concentration (by approximately 60%) in the treated cell culture medium. This suggests the probable involvement of a Lipid Peroxidation in the toxic action of diphenyl diselenide on MCF-7 cells. Ph₂Se₂ was able to reduce cell proliferation rate of the MCF-7 cells as well as inhibit their colony-forming ability and to induce morphological changes in the treated cells, viz. irregular shape and size of the cell body and reduction of cytoplasmic granulation. In the whole examined period of the experiment (40 h) exposure of the cells to Ph₂Se₂ (1-0.1 mM) did not lead to apoptosis of the cells as no difference was found between the number of the apoptotic cells (stained by the EtBr/DIOC₆) in the Ph₂Se₂-treated and the control ones. When an infectious disease outbreak appears to be spreading in a population, it is often very difficult to track. Efforts to track people who are exposed to a contagion can be hampered by the fact that only symptomatic people typically act infectious. Moreover, the exposure pattern is affected by the naturally low incidence of infection
