-- No Setup Required -- Prolog+CG is an Integrated Development Environment for Prolog. It has been developed to be portable, so it can be used with all versions of Windows XP up to Windows 7. Prolog+CG does not require any setup and installation process. Just drop its files in a custom location on the disk or on a removable storage unit and directly launch it on any computer. Prolog+CG is user-friendly, since it has a command-line dialog that runs side by side with the graphical interface. The graphical interface is simple and easy-to-use. You just type or paste your Prolog code, then choose the custom settings (number of boxes, button size, etc.) and execute the applet. That's it! Prolog+CG has many options. You can write your Prolog code on any tab and see a direct comparison of it with the applet's result. You can save it as a Prolog+CG file, which allows you to transfer it from one computer to another, load it again later and continue where you left off. Prolog+CG is an IDE which does not add new entries to the Windows registry or Start menu. So you can delete it later and be sure that no traces are left behind. Version: 1.6.4 Status: [Released] Description: REBUS (REBUSé) is a PL/I-based language for the construction of finite element models (FEM) in solid mechanics. It is an interactive system, where the user can specify the model parameters, build the FEM model and visualize the results. The system integrates a set of finite element analysis routines into a dialogue interface with a graphical user interface (GUI). The frontend is written in PL/I and the backend in Java. It is written in a modular fashion to allow the user to customize the system. Target Platform: The REBUS user interface is written in PL/I. However, it is possible to use the REBUS applications on any platform that supports Java and a PL/I frontend. Java is a platform independent programming language that runs on any platform that has a Java Virtual Machine (JVM). REBUS uses the Java Virtual Machine to execute Java programs on any operating system platform. Target Platforms: REBUS supports a variety of operating systems and Java Virtual Machine's: Windows 2000, Windows XP, Windows Server 2003, Windows Vista, Windows 7, Linux Red Hat Enterprise (RHEL), CentOS, Debian, Ubuntu and Solaris. Package: REBUS is a software package that includes the REBUS software, the REBUS libraries, documentation and examples. The University of Delaware has selected Software as a Service (SaaS) for its decision management system. After several years of consideration, the University decided to move its decision management system, which manages the enrollment and graduation processes for a university-wide group of 20-25 large courses, to the cloud. The solution is an enterprise product for managing courses and students, developed by a premier software company with decades of experience in university information systems and a
