Software and hardware Latest Forum Posts In an attempt to remove the initial impression of Steam OS as being a toy operating system, Steam just released an impressive real-time Linux-based OS, Steam Machine, which now is available for interested developers to join the Steam Machines project. Steam Machines are small computer enclosures with a very high build quality which can operate Windows or Linux on it, and which can run Steam, SteamOS and Steam Big Picture in full-screen mode. The Steam Machine will be available to developers in order to let them test the software and hardware that will be included in the future Steam Machines. It seems that this will be the first step towards a Linux-based open-source OS. So what's in the box? The Steam Machine comes with an NVIDIA® GeForce® GTX-970 graphics card, 2 x 2.5″ HDDs, an Intel® Core™ i7 4770 CPU with 4 cores and 8 threads running at 3.4GHz, 16GB RAM, an HDMI and DisplayPort connection, a USB-2.0 port, an optical audio output and a USB-C port. The Steam Machine can be configured with an ATI Radeon™ HD-5850 graphics card, 3 x 2.5″ HDDs, an 1d6a3396d6
