Royal mail.Q: How do I open multiple.csv files in Matlab? I have some.csv files, which I would like to load into Matlab to perform data analysis. The idea being that I can then select my data for one specific analysis,

compare the results between the data and the rest of the data and also compare the results from one project to another, all without having to repeat the data processing over and over. So my question is, is there a way to open multiple csv files into matlab in one go rather than having to open each.csv individually in Matlab? (I will happily rectify if the question is not clear enough) A:

Within MATLAB you can open multiple files and in fact you can even combine data from different files. So the easiest way is to take your files and convert them to text files using `dir()` and `strjoin`. The text files now consist of a matrix with one row per file and one column per line.

Example `>> f = 'C:\path\to\your\files\file1.csv'; >> f = [f
';' 'another file'; 'file3.csv'];
>> text = strjoin(dir(fullfile('`

```
C:\path\to\your\files', f{:})), '  
) text = 1 2 3 4 5 6 [ 21, 246]  
[ 40, 255] [ 61, 236] [ 22,  
249] [ 47, 220] [ 4, 256] [ 61,  
248] [ 41, 236] [ 1, 237] [ 23,  
240] [ 45, 237] [ 7, 242]
```

Then you can just load this
into MATLAB using
`load(text)`. A: Make a list of
the paths with the csv files.

Then use a single load
command `load([p1;p2;p3....])`

With: `fid =
fopen([p1;p2;p3....]);`

load(fid); fclose(fid); Gordon 3e33713323
