The RSoft Network Speed Benchmarker Crack Mac displays speed statistics for your computer network. It can display the speed of all network devices (PCs, printers, etc.) on your network. The Benchmarker also includes a feature that automatically finds the fastest transfer rates on your network. In addition, the Benchmarker automatically measures and reports transfer rates to a file. The Benchmarker can be used by anyone to test the speed of their network connections. It's small size and easy-to-use interface make it a great tool for home, business, or school networks. Features: - Shows the speed of all network devices on your network. - Displays the speed of each device and its Transfer rate. - Shows transfer rates in kilo bits/sec and megabits/sec. - Shows the time it takes for a file to transfer, the total time spent to transfer, and the Transfer rate. - Shows the peak transfer rate of each device. - Allows you to sort the transfer rate by device. - Allows you to measure the peak transfer rate of individual files. - Allows you to measure the peak transfer rate of individual files, sort by device, and to view the contents of a file in a scrolling window. - Displays transfer rate in kilo bits/sec and megabits/sec. - Graphs transfer rate in kilo bits/sec and megabits/sec. - Shows the size of the file, the time it takes to transfer, and the transfer rate for the entire file and for each individual block. - Allows you to measure the transfer rate of individual files and to graph the data. - Shows the size of the file, the time it takes to transfer, and the transfer rate for the entire file and for each individual block. - Allows you to sort the transfer rate by block. - Allows you to graph the transfer rate by block. - Allows you to zoom into a graph and to change the scale and axis ranges. - Allows you to measure the transfer rate of individual files and to graph the data. - Allows you to measure the transfer rate of individual files, sort by device, and to view the contents of a file in a scrolling window. - Allows you to view the contents of a file in a scrolling window. - Allows you to measure the transfer rate of individual files and to graph the data. - Allows you to sort the transfer rate by block. - 77a5ca646e

This program helps you test the actual speed of your network. It does this by sending 'blank data' to another PC, and taking speed measurements during the send process. It then displays them on the screen.

A network speed test that runs and shows you how fast your network is, and your own PC. Download and Install RSoft Network Speed Benchmarker: NOTE: To access the download link, you must have administrator permissions on the computer. Click here to download RSoft Network Speed Benchmarker To install RSoft Network Speed Benchmarker: Run RSoft Network Speed Benchmarker as an Administrator (right click on the.exe file and select "Run as Administrator") Click "Install" RSoft Network Speed Benchmarker will automatically install the appropriate files and drivers. RSoft Network Speed Benchmarker settings: After installation, you will be asked to allow Windows to communicate with the other PC. Click on the "Allow" button. Click "Start" RSoft Network Speed Benchmarker will automatically start running, and will display its "Welcome" screen. Click "Run Network Speed Test" RSoft Network Speed Benchmarker will start sending data to the "test PC". It will take approximately 3 minutes to do this. Click "Stop" RSoft Network Speed Benchmarker will stop running. It will now display your "result" screen. You can now see the results. Depending on your PC and network speed, the speed will vary. The fastest speeds are achieved by using a PC with a fast CPU (i.e. a new Pentium or Celeron PC), with a fast network card (i.e. a 100mbps NIC) and a fast hard drive. Explanation of the graphs: These graphs show the speed of data transfer, over the specified period. Graph: Transfer Rate When the blue line is moving up and to the right, it is the speed of data transfer over the network. Graph: Actual Network Speed When the blue line is moving up and to the right, this represents the actual speed of your network. It is only approximate, since it is based on the time it takes to send a blank data file (which may vary due to network load and other variables). This can often be more than 5% higher than the actual speed of your network. Graph: Peak Transfer Rate When the blue line is moving down and to the left, it is the peak speed of your network. This is usually around 10% higher than the speed of actual data transfer. Graph: Average Network Speed When the blue line is moving down and to the left, this represents the average speed of your network. Tips for improvement: To increase network speed: Use a faster CPU Use a 100mbps NIC Install Windows 2000 or later (or MacOS 9 or later) Replace the hard drive with an SSD (solid state drive)

Internet Explorer, Firefox, Chrome, Safari on any platform. Mac OS X 10.6.8 or later Windows 7 SP1 or later RAM: 2GB of RAM (4GB recommended) Hard Disk Space: 10GB of available space Recommended: Video Card: NVIDIA GeForce GTS 450 or ATI HD5870 series Network: Broadband Internet connection Processor: Intel
