MS Cash Book is an easy to use 'Double Entry Account System' that can prove useful for small businesses. It consists of general ledger, payments and receipts, profit and loss, balance sheet, GST/Income tax reports, journal entries and other customizable reports are available. The whole package is currently designed for use in New Zealand, however it can be customized to work in any country. MS Cash book is developed in Delphi. This allows MS Cash Book to be fast and accurate. Currently the system is using an embedded Paradox database. Paradox is a DBMS framework that can be used on both network servers or local files, so a full-fledged database server may be also used. MS CashBook requires in internet connection. A: I have used similar products and system in their early stage but eventually I found that I did not like the functionalities of that system. I prefer a more heavy weighted functional system. So I came up with a similar functional system but with some additional features. The system i developed has some additional features as follow: Multi-currency support Bill of Material (BoM) Support Piece Rate (CR) - allow supplier to calculate the flat or piece rate Payment on order Multiple user login User dash-board (charts for each user) Batch jobs (scheduling of jobs) Attachments (multiple attachments with each transaction) User can define the cut-off period for his own accounts and maintenance items Account Pre-tax and post-tax Material entries can be imported from excel Single entry and double entry transactions Option to print reports Option to create accounts form excel and import Option to assign the account label to the account Option to label each transaction with the account name Option to label each transaction with the transaction description Option to label each transaction with the date Option to label each transaction with the name of the supplier Option to label each transaction with the account of the supplier These features are what you are looking for. However the system will run on Small Business Accounting Software only but not on CRM. As the system is simple it will be able to be maintained. The other advantage is that the user do not need to use any other system. I also found that many business owners are lazy and then they will use multiple excel if they do not know about the available
