The menu is a key element of every Windows application. It can be used to navigate through menus or to provide a user interface for a program. Menu Designer enables you to design the menu and to create all the required aspects of the app. It allows you to add new menu items, to change icons and to build the menu in a very simple way. You only need to write the name of each item in order to add it to the menu. Even the name of

the file can be instantly filled based on the caption of a menu item. This is an important feature since it saves you a lot of time. The visual menu editor enables you to rearrange menu items and to create a complex structure quickly and efficiently. You only need to write the name of each item in order to add it to the menu. Even the name of the file can be instantly filled based on the caption of a menu item. This tool can improve your productivity by reloading the last session or by

creating a list of favorite projects that can be loaded with one mouse click. The capture menu feature enables you to load a menu structure from an external VB file or directly from an executable file. In order to embed the menu in your application you need to generate the code for the menu options and to save them to a DLL file. This operation is performed by the Menu Creator add-in by simply pushing a button. The package also includes the MenuExtended library that allows

you to change the aspect of the menu items. It provides you with multiple menu styles that can be easily applied to your project and customized. This is an extremely useful tool that you should have installed on your computer when you create a new Visual Basic project. Since every app needs a nicely designed and easy to use menu, you should try it when creating a new program in Visual Basic. applications. The sample application is provided for testing the features of the package. It shows how the add-in can be used to make a user-friendly and responsive interface. Allows you to rearrange menu items and create complex structures. You only need to type the name of each item in order to add it to the menu. You can save the template of the menu for reuse in future projects. You can add menu items to the main menu of the application. You can save menu

options to a VB file for editing them later. The visual menu editor allows you to rearrange the menu items and to create a complex structure. Allows you to load a menu from an external VB file or directly from an executable file. In order to embed the menu in your application you need to generate the code for the menu options and to save them to a DLL file. The package includes the MenuExtended library which allows you to change the aspect of the menu items. You can change

the default icon of the menu items. The menu can be saved as a picture file in order to easily edit it. You can save menus to a vb file for reusing them later. The package includes the MenuCreator.chm file in order to quickly access the tool. The add-in is designed to be compatible with Visual Basic 6 and intends to help you create a complex menu without writing a line of code. Let's begin Each menu item is represented by a TMenuItem object. A menu item can be a link

to a form, to a procedure or to a file. The name property allows you to give each item a title that will be displayed on the menu. The icon property defines the icon of the menu item. The icon must be a 16 x 16 pixel bitmap with transparent areas. The caption property specifies the caption of the menu item. The enabled property specifies if the menu item is enabled. If the item is enabled, it will be displayed on the menu. If not, the item will be hidden. The check property

specifies if the menu item should be checked or not. The submenu property defines a submenu. A submenu is a menu that can contain other menus. The shortcut property specifies the shortcut key that will be displayed on the menu when the menu item is selected. The key can be a number or a string of numbers and letters. The image property indicates a bitmap image file. The image can be used for drawing the menu items. The menu object is a class that represents the menu of the

application. You can use it to create and modify menus. The menu template is
