/home/t/test/test.py, I have:

```
#!/usr/bin/python3 import sys import  
subprocess for i in range(1, 11): print(i)  
print("subprocess")  
subprocess.Popen(['python', '-c', 'import  
random; print(random.randint(1, 11))'])
```

I have been receiving an error as such:

Traceback (most recent call last): File
"/home/t/test/test.py", line 1, in import
subprocess ImportError: No module named
subprocess However, I am able to run the
Python file without any issues in Bash. I am
trying to get this Bash script to run for a set
number of times, but need to be able to call
the Python file. How can I resolve the error

so that I can call the Python file within the Bash script? A:
