Shape Viewer is a lightweight Windows application designed to help users check out the contents of SHP files which store geospatial vector data, such as points, line, and polygons. Since this is a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to open SHP files on the breeze. Shape Viewer sports a clean and straightforward interface that gives users the possibility to insert files into the working environment using the "drag and drop" support or built-in browse function. What's more, the program offers direct access to the files and folders stored in the computer, so you can easily select the SHP files. Other important features worth mentioning enable users to zoom in or out, exporte the current coordinates to XLS file format, make file associations, as well as create SHX or DBF files. Since there aren't many configuration settings even less experienced users can master the process with just a few clicks. During our testing we have noticed that Shape Viewer offers good image quality and without errors throughout the entire process. It manages to remain light on the system resources, so it doesn't hamper system performance, nor interfere with other programs' functionality. Shape Viewer Demo offers you a unique opportunity to fully explore all these features with our demo application. The demo version of the utility can be used for a short period of time, before you decide to make the full purchase. You can keep this demo version on any USB flash drive or other devices, and whenever you need to open SHP files you will just need to launch the program and follow the instructions. No additional registration is necessary. Shape Viewer allows you to check out files in their original format, edit the current coordinates, display the images, or display the files in a grid view. The application can analyze the content of one or more files stored in the application and extract the coordinates. You can export the data to other SHP files, XLS and DBF format. Shape Viewer supports both CRD and CEF database formats. In addition, the software can analyze and display the following types of geospatial vector data: points, lines, polygons, and spatial relationships. Shape Viewer includes a wide variety of functions that help users fine-tune the program, such as

What's New In Shape Viewer?

PRO 2.8.1 is an advanced image editor and image browser for Windows. You can use it for reading and editing images, image maps, as well as image sequences.
