Porphyrin-based field-effect transistors. Porphyrin-based semiconducting thin films were prepared using porphyrin-1-acetic acid and porphyrin-4-acetic acid as the channel and gate material, respectively. These two porphyrins have distinctive O-alkyl chain positions on the porphyrin ring, allowing us to distinguish them. The films prepared from porphyrin-1-acetic acid exhibited the best field-effect mobility and showed a unipolar transport behavior. The mobility of the porphyrin-1-acetic acid film was three times higher than that of the porphyrin-4-acetic acid film. The electron transport mechanism of the porphyrin-1-acetic acid film was investigated using photo-CIDNP NMR measurements. The spin-coupling of electrons and holes was observed in the porphyrin-1-acetic acid film, whereas it disappeared in the porphyrin-4-acetic acid film. The hole transport mechanism of the porphyrin-1-acetic acid film was demonstrated using MO-XAS measurements. The result showed that the hole transport mechanism of the porphyrin-1-acetic acid film was through-bond hole hopping. The two porphyrin-based field-effect transistors exhibit a clear rectifying behavior, owing to the bulk heterojunction between the porphyrin and the dielectric (SiO<sub>2</sub>) layers.

The power of co-citations in identifying references and citations. In this paper, we study the problem of identifying known references using citations. To define our model, we use the concept of co-citation networks: a network is co-cited if a citing work is co-cited by the cited work. We show that co-citation networks can be used to reliably detect known references among citations in three reference collections: Medline, SIGLE and Scopus. We observe that references to a set of co-citing papers are highly clustered in co-citation networks and can be used as a reliable proxy for references in the set of papers. This also holds for citations to scientific papers. Using this information, we obtain a further set of references which significantly improves the precision of the known references. Since references and citations are connected, co-

My daughter is about three or four and I've observed that when she watches the show, she'll stop singing, she'll get really upset and cry and simply say the muppets don't sing and the message is always that its not

acceptable to sing. I've asked her what she means by "sing", she says "when you put your mouth to the mouth of the mic and your lips close on it you make a noise" I've watched the show and don't see that the Muppets are ever singing anywhere. When they sing it's a character singing as a character, like Miss Piggy or Fozzie Bear, which is fine, but watching the muppets, all I see is an amoung of characters being themselves, I don't see any singing. I think its easier for her to understand it this way. She'll only watch it for a few minutes because she gets upset, but I'm stumped as to why it does it. A: I've always had a few fans of the Muppets, and the show is for children. I'm starting to realize now that my kid didn't develop the same kind of love for the Muppets as I did. If you don't like what the Muppets are doing, perhaps that could be why your daughter dislikes the show. Wikipedia claims that some scenes were deleted for sexual content, and that might be the reason your daughter didn't understand their on-screen singing. You may be happier to simply not let her watch the show. A: I wonder if it has something to do with the fact that the Muppets are actually puppets and not singers? When they sing it's just'speaking'. If she thinks its funny when they talk, maybe she can't really relate to what the Muppets are actually

## **Kitchen Garden Aid With Full Keygen**

Kitchen garden aid is a useful Java software that comes with a couple of design examples for you to follow. From its primary feature, it consists of three main sections: Tools This section provides you with a friendly user interface and ensures that your garden will follow good design standards. For instance, you can generate lists of compatible and incompatible species, design a daily schedule, set the desired root depth and understand which plants require richer soil. Plant database In this section, you can add new species to your garden and edit information about them, such as their Latin name, plant type, compatible and incompatible partners, suitable and unsuitable planting times, crop rotation designations and nutritional value. Furthermore, you can also set traits and beneficial properties for each individual species and opt for an online help guide, in case you find it challenging to operate the program. Breeding database When it comes to the program's breeding function, you can choose to import a custom CSV file that can help you set up information such as the number of plants required, time gaps and number of reproductive cycles. Once this information is entered, you can also edit the planting design by selecting the desired plant type and adjusting the allocation of each plant per day. Over 350 plant species You will find over 350 species that can be added to your garden, whether they are native or modern cultivars. Furthermore, you can choose among species with different characteristics, such as their Latin name, plant type, rooting depth, crop rotation allotment and planting and harvesting time gaps. Easy to use design tools This application can be run in either full-screen or windowed mode. More so, it will not hinder the efficiency of your computer system and display design examples and relevant information on the screen. In-depth help and free tutorials If there is anything you need to know, you can get in touch with an online tutorial, which will provide a more helpful environment where you can learn how to use the program and its functions.
