SoundEdit comes with a "WADEExt" utility. This utility detects the "mus" files and then lists them by various ways, including size, name, date, and directory name. SoundEdit has some limitations. It does not support WAV or mp3 files. It also lacks the ability to edit meta information (title, artist, etc). This is the reason why SoundEdit had to be created. This is an application that allows you to switch the background and foreground colors of your selected text with the mouse. You can create themes for your multiple games that you use. What's New In WADExt?

=====
 WADExt is a program for extracting parts of a WAD. The WADExt doesn't actually save anything of the WAD but it makes it easier to locate, analyse and edit needed parts. You may find the WADExt useful for fighting the endless loop of data extraction. The WADExt allows you to easily extract and analyse data in the WAD data file format. The WADExt also has a Tool to give you a quick overview of the WADExt information. To start the program, click on the big green arrow, to the right of the 'Start' button on the desktop. This will bring up the 'Program Start Screen'. The Start screen allows you to choose what type of files you want to work with. The program handles the following: WAD files (.wad) MUS files (.mus) ID-Software data files (.id) BeOS data files (.beos) GAME data files (.gsd) SCUMM files (.scumm) END data files (.end) You can also tell the program to only look at certain archives. All you have to do is set the selection into one of the types. WARNING: ===== I cannot and will never make any kind of guarantee that the WADExt will not damage your PC. It is included for testing purposes only. The WADExt is not a program to extract a WAD by any means of the word. The WADExt is a very simple program that was designed to extract and use data from the WAD files. The WADExt has been made to work with the files, if you know the location of the files on your hard drive. I want to make it clear that the WADExt is free as in free beer. There is nothing to ever pay for. There is also nothing to find. This means that WADExt might as well break your PC.
