Programming languages
AutoLISP AutoCAD's native
programming language, which
has been used for AutoCAD
from 1982 to version 2002.
Visual LISP Visual LISP-4,
used in AutoCAD 2000 and

earlier, was a variant of the LISP language in that it was a highly interpreted language. Its greatest disadvantage was that it was very slow to develop in. VBA Used in AutoCAD 2002 and later to develop macros, especially those that run when the program is launched. .NET Used in AutoCAD 2006 and later to develop extensions for AutoCAD. ObjectARX AutoCAD's object ARX

library, that allowed one to write add-ons. AutoCAD-based add-ons allow AutoCAD users to interact with other AutoCAD applications (like CAD Foundry's PowerMILL or AutoCAD Architecture) and share their data with other programs. AutoLISP/ILI9000 Used in AutoCAD 2006 and later to develop plugins for AutoCAD. Architecture AutoCAD's architecture can be

classified into three parts: The under-the-hood development of the product, consisting of features such as the visual interface, CADAPI, and programming interfaces like AutoLISP The architectural system, consisting of the business and data models The CAD installation, consisting of a graphical user interface, middleware, software, document and data formats,

network connectivity, infrastructure and other supporting systems Interface layers The Autodesk® product architecture consists of three interfaces: A graphical interface (the human interface, which can be customized by the user) An API that allows software to integrate with the product An Application Program Interface (API) that allows software to interact with

the product CADAPI CADAPI, an abbreviation of Autodesk® Architecture Application Programming Interface (or Autodesk® Architecture **Application Programming** Interface), is an API, which allows software to integrate with the product, and is licensed under the SIL 3.0 license. Document and data formats AutoCAD uses its own file format, called DXF. It was

originally used for plotting and is similar to the standard. The schema of the DXF file format is divided into sections. The top section of the DXF file is reserved for the primary objects in the drawing, in other words 5b5f913d15
