AutoCAD (2014 version) AutoCAD Key features CAD Software Design Drafting Data management Objects Projects Tools Support Technical Help Reference Feature overview AutoCAD is not intended to be a direct competitor of other CAD software programs but rather an application designed to meet the needs of the broad spectrum of business users. It is able to handle most 2D drafting tasks, and some 3D modeling as well. At its core, AutoCAD is a 2D drafting and design application. 2D is not AutoCAD's only method of working, however. Many features and tools are also 3D oriented, although 2D is the primary focus for AutoCAD. AutoCAD's design capabilities go well beyond merely creating 2D drawings. It also has many tools for 3D modeling, rendering, and for manipulating 3D objects, including architectural and engineering. AutoCAD can also connect to Microsoft Office and Google Earth software. AutoCAD is a mature tool that has been around for many years, and is easily one of the most widely used CAD tools in the world. AutoCAD features AutoCAD has the following feature set: CAD Software AutoCAD gives you the tools you need to create technical and architectural drawings. There are tools for drafting, such as straight and arc drafting, as well as tools for creating compound shapes and object snap and text layout, both on paper and on screen. With the ability to create multiple objects and align them within the drawing, AutoCAD is a powerful drafting tool. Other important features of AutoCAD's CAD software include the ability to see the drafting process as it's happening, the ability to rotate and scale 2D and 3D views, and the ability to measure and create dimensionally accurate drawings. Design AutoCAD has many design tools that enable you to generate many different types of 2D drawings and 3D views. You can create 2D sheets for architectural drawings, for example, and can generate 3D views of a plan or section of your architectural design. AutoCAD also has tools for creating surface views, with which you can see your drawing projected onto a 3D model. Some of the 3D modeling capabilities of AutoCAD are

Customer-facing features In addition to the above features, AutoCAD has a number of other features which are designed to aid customers. These include: Some AutoCAD features are available only if the user is connected to the Internet via the AutoCAD Enterprise network, or Autodesk Live, or is using a web-enabled mobile device. In some cases, features that are not available when connected to a network are only available to Autodesk users at the time of the AutoCAD release. For example, drawing templates are only available on the Autodesk Exchange apps which are only available for current user at the time of release, and are not available for download when AutoCAD is not connected to the Internet. Per-user pricing The costs for AutoCAD vary based on the customer type. Some of the main customer types and their pricing include: Free license Autodesk offers a free product for users who do not require any "perpetual licensing" and have a valid education, hobby or small business license. The free version of AutoCAD can be used on a single computer, although it is not able to be used on a networked environment (e.g. networked computers, desktop workstations, network file storage, etc.). The Free product of AutoCAD can be used by anyone who has a valid Autodesk software purchase, the educational Free license, or a valid license for a small business. A comprehensive list of the licenses that are supported by AutoCAD can be found in the AutoCAD Sales Environments section of the AutoCAD Product Information web site. Cloud licensing AutoCAD Cloud is an industry-first cloud-based distribution model for the Autodesk suite of products. This means that customers can license AutoCAD through a cloud-based subscription service and pay on-demand. This addresses the scalability, affordability and flexibility challenges facing many companies today. Replication

Autodesk Replication is a technology-based solution that allows users to synchronize changes from their local AutoCAD database to a remote network location. Users can replicate data from one computer, or several, to a number of locations.
